

Presync works with industrial property developers, managers and tenants to:

**Identify quick wins through energy efficiency (your most cost effective energy savings and emission cuts).**

**Prepare for capital-efficient build and expansion:**

- network connection
- substation specification
- roof strength and specification
- rentalise/capitalise costs

**We can:**

Understand your energy needed – load profile, process drivers, storage:

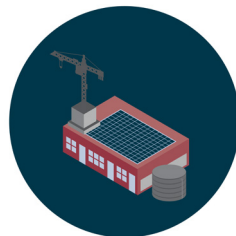

- power factor correction

Analyse your current loads and bill structure

Identify energy efficiency savings:

- process
- equipment

Help drive your energy productivity

Right-size a suitable solar and water harvesting options

Investigate other energy services provision:

- ground source heating/cooling
- co-generation
- storage

Project manage the:

- specification,
- procurement and installation
- ongoing optimisation
