

Presync works with retail property developers and managers to identify and capture sustainable business opportunities.

Supply Side:

- Embedded network
- Solar is ideal for reducing peak load – driven by summer A/C load and setting network charges

Demand Side:

- Energy efficiency – lighting, ground-source heat exchange
- Demand management including storage (thermal, battery etc)
- Demand response

We can advise on economical options for greenfields and brownfields projects, and retrofits of existing sites.

Our Process:

Analyse your current loads and bills

Identify energy efficiency savings

Right-size a suitable solar option

Project manage:

- specification
- procurement
- installation
- ongoing optimisation in service

Investigate other energy services provision like:

- ground source heating/cooling
- co-generation
- storage
